

Installing Jira Tool on Windows

This document describes about installation of Jira on Windows operating system.

Follow the steps to install Jira:

1. On your browser, open atlassian.com.
2. On the **Sign up** page, perform one of the following:
 - Enter your work email and sign up.
 - Select from **Google/ Microsoft/Apple/ Slack** account to sign up.
3. On the **Sign In** page, select Google and click **Continue**.
Your email address and full name are displayed on the **Create an account** page.
4. On the **Create an account** page, click **Create your account**.
On the **Let's name your site** page, your site name is mentioned with **.atlassian.net** extension. On the same page, select **Continue**.
You can change this site name according to your liking.
5. On the **What kind of work do you do?** page, select the appropriate option that best suits your work requirement.
Note: Your selection helps in personalizing and enhancing your Jira experience.
6. On the **Where would you like to start?** page, select one of the following options and click **Start now**:
 - Project Management: It helps to create a project management structures.
 - Scrum: The scrum framework enables software teams to manage complex projects.
 - Business collaboration: It helps teams to collaborate and track work.**Note:** You can change this option later. Selecting a template will not limit what you can do in Jira.
7. On the **Welcome to Jira** page, select one of the options that best describes you as a user and select **Start using Jira**.

You have successfully signed in and can view the main dashboard of Jira application on your screen.
